

A2 - Bug #106

Methods cannot be called

02 January 2021 16:37 - Anton Dmitriev

Status: New Priority: Normal Assignee: Category: Target version:	
Description Compiler backend traps when generating a call to a POINTER TO RECORD's method defined as follows: MODULE M; TYPE T = POINTER TO RECORD END; PROCEDURE (t: T) P (VAR b: UNSIGNED8) ; BEGIN END P; PROCEDURE Fail; VAR b: UNSIGNED8; t: T; BEGIN t.P(b) (* compiler backend traps at this procedure designator *) END Fail; END M. Attached is a trap report (for my actual module), but the error is easily reproducible.
