

A2 - Bug #109

Console access to the host

Description	
<p>Hi, In ETH Oberon or in the Oberon subsystem of A2, console access to the host works as described in https://en.wikibooks.org/wiki/Oberon/A2#Host_Console.</p> <p>A2 has Tools > TCP Terminal which should also provide host access. I haven't succeeded to make it work. If telnet works in Oberon, I should give protocol "Telnet", without the quote marks; correct? In the next dialogue I've tried "127.0.0.1,23" and "localhost,23". The response is "127.0.0.1, invalid address" and "localhost, invalid address". I'm stumped. Ideas?</p> <p>Thanks, ... Peter E.</p>	

History

Update: Tools > Secure Shell connects to localhost and to a remote host.

Thanks Guenter, ... P.
